

## 3D Butterfly Craft

*Supplies needed: Construction paper, scissors, glue or tape, markers, googly eyes, pipe cleaners*

4 years +

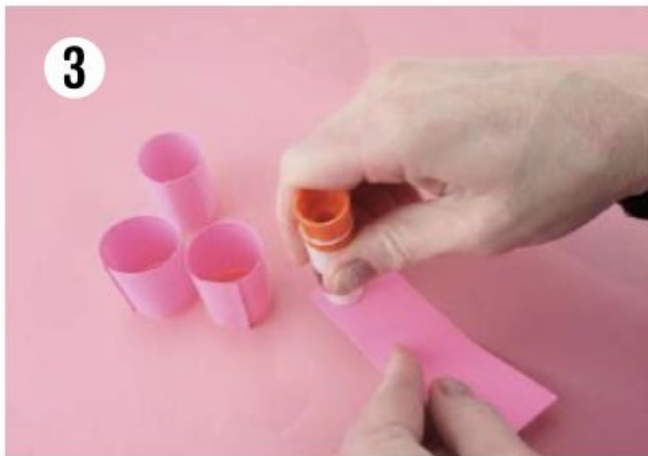

15+ Minutes

1+ People

1. Print and color the attached wing template. Or you can trace the wings onto a colored piece of construction paper
2. Print and color the body pieces, or trace them onto colored paper.
3. Put a small amount of glue or tape on one end of each body piece.
4. Fold the strips into a circle, overlapping the ends and gluing or taping them together.

5. Glue or tape the center of the butterfly wings to a piece of paper.
6. Make sure to leave the outside of the wings unattached. Fold them up to give the butterfly a 3D look

7. Cut a pipe cleaner in half to make your butterfly's antenna. Glue, or tape, them to the top of the wings.
8. Curl the tops of the antenna

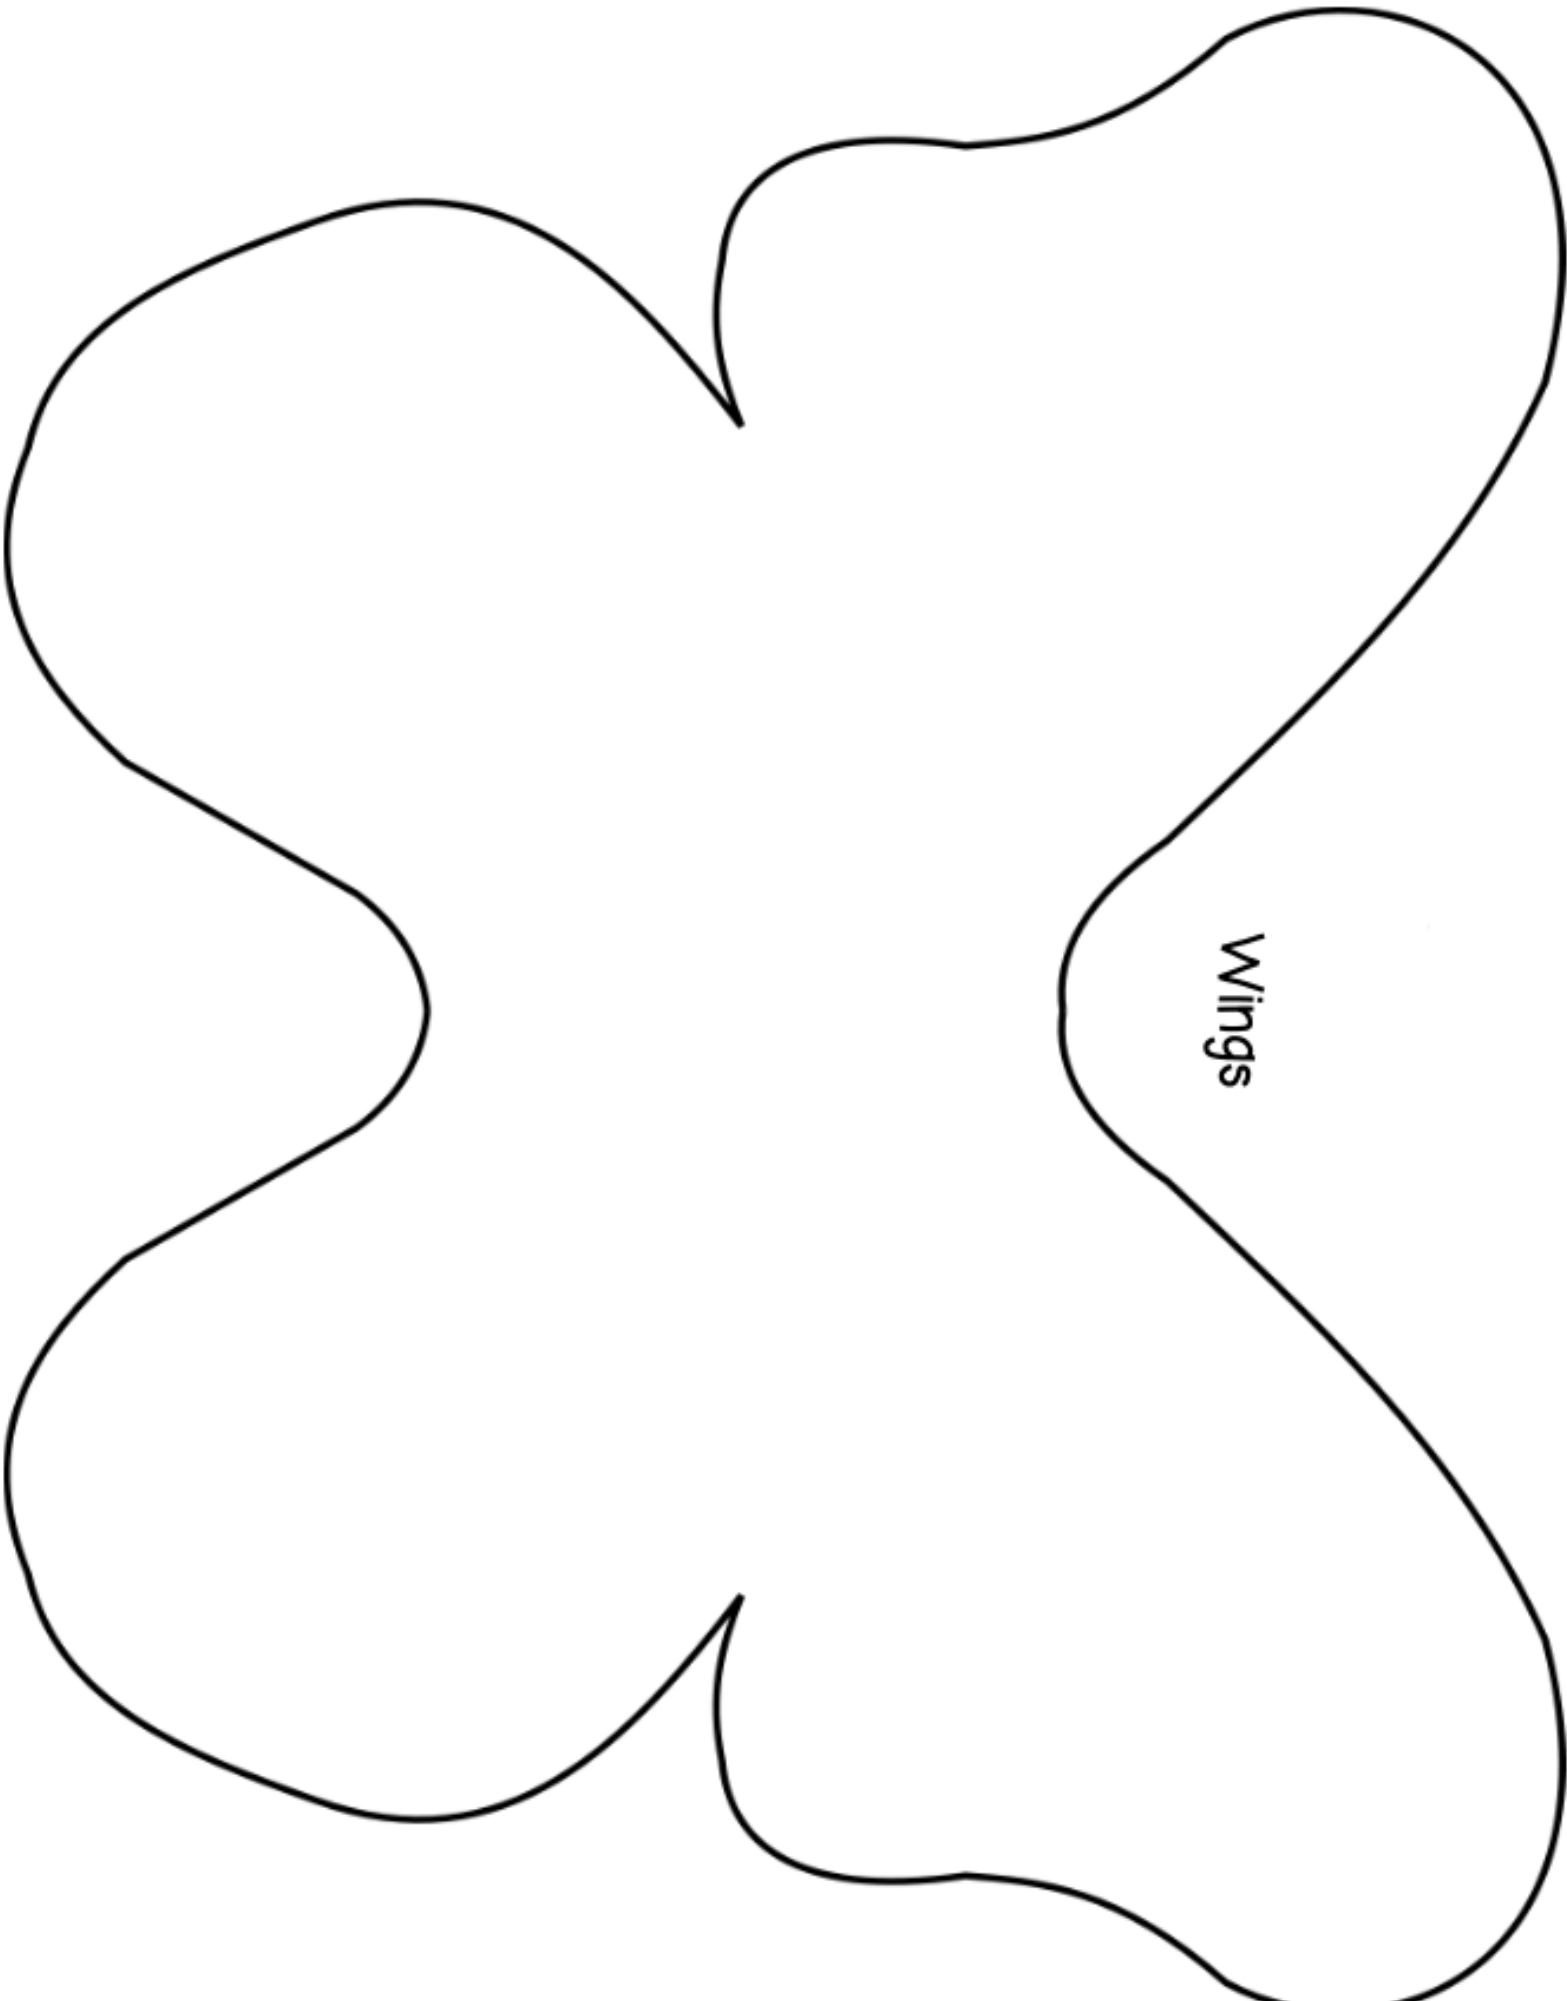

9. Glue or tape your body pieces to the center of the wings, seam side down.

10. Add designs to the wings. You can cut and paste on different shapes, or draw directly on the wings.

11. Add eyes and a face if you'd like!
